Message from the President

The Indian Society of Aerospace Medicine has made rapid advances from the time of its inception and has made significant contributions to scientific knowledge in India and abroad under the able leadership of some of our pioneers in the field.

No modern Aviation Industry progresses without close medical support. It is heartening to note that the learned members of Indian Society of Aerospace Medicine have extended this support without any reservation. By their keen understanding of human aspects of Aviation, they have contributed a great deal to flight safety not only in the Armed Forces but also in Civil Aviation.

During recent years, the Society has crossed the boundary of Aviation Medicine to step into the realm of Space Medicine, keeping in stride with our country's space programme. The transition into this new field of environmental medicine has been made possible only through the far-sightedness and untiring efforts of our members.

I am quite confident that with the dedicated and selfless work by all members of the Society, we will continue to uphold this tradition. I wish all the members happiness and success in their future endeavours.
